

NEW PRODUCT

Long Length Handrails

Why would I need an 18' Length of Handrail?

Fitts introduces stock 18' handrails in Solid Cap 6010 Oak, Maple & Cherry

Traditional building continues to evolve and with these advancements require the need for new creative products. Fitts introduces 18' handrail and 22' bending handrails, as well as pin top newels that will mount into standard 1-1/2" handrail bases. This alleviates the need to add a fitting into the rail, and lowering the cost. As more residential homes have been designed with 10-foot ceilings and engineered floor joists, the standard rise and run (vertical and horizontal) dimensions change, thus increasing the length of handrails needed. This also occurs on curve stairs creating the need to 22' long sections of bending handrails. Pin top intermediate newels have been designed with a 1-inch top dowel pin so that it can be installed directly into standard rail profiles — other profiles of pintop intermediate newels are available .

* Alternative Rail Profiles Available
